Experiment -3

Study of Network Cables

Aim:

Understand & study of diff types of network cables.

Description:

This experiment was conducted to study the construction and use of straight through and crossover twisted pair cables. The color coding standards were followed to prepare the cables using RJ45 connectors and a crimping tool. The prepared cables were tested to verify proper network connectivity btw devices.

1) Difference btw cross cables & straight cable

Straight cable: used to connect diff devices

ex: PC to switch / Router.

Cross cable: used to connect similar device

ex: PC to PC or switch to switch.

The straight cables are most commonly used ethernet cable in LANs

2) The type of cable used to connect two PCs are cross cable. The cross cable is commonly used to connect PC to PC switch to switch or Router to Router

3) Types of cable used to connect a router switch to your PC.

4) The category of twisted pair cable in the lab to connect the PC to the CAT 6 UTP- Category 6 unshielded twisted Pair is the twisted pair cables used lab.

5) The cable was successfully prepared and network connectivity was verified using a cable tester or by connecting device.
